CONTACT US

ECA&D Team: eca@knmi.nl

Participation in ECA&D is open to anyone operating measurement stations providing daily data. We prefer *validated* data and for Meteoalarm we are particularly interested in the following data:

- Daily average wind speed (in m/s)
- Daily maximum wind gust (in m/s)
- Daily wind direction (in degrees)
- Maximum hourly rainfall
- Maximum hourly snowfall

Other elements collected and provided by ECA&D that can be used to quantify e.g. heat & cold spells, droughts or extremely wet periods are:

- Daily maximum, minimum and average temperature
- Daily sums of precipitation and sunshine duration
- Snow depth measurements on a daily basis
- Daily average values of humidity, cloud cover and sea-level pressure

ECA&D provides the possibility to make your daily data publicly available where web users can download this data freely. Another option is that your data are only made available as derived products (e.g. monthly averages).
